

**FREEWAVE TECHNOLOGIES SELECTS MATTHIAS VAN DOORN AS PRODUCT MANAGER,
ETHERNET AND LICENSED RADIO SYSTEMS**

Newest addition to company brings wealth of wireless communications and product management experience to FreeWave's growing roster

BOULDER, Colo., Dec. 2, 2009 — FreeWave Technologies, (<http://www.freewave.com>), manufacturer of the most reliable, high-performance spread spectrum and licensed radios for critical data transmission, today announced it has hired Matthias van Doorn as product manager for its Ethernet and licensed radio systems products.

As the latest addition to FreeWave's growing employee roster, van Doorn, a native of Germany, holds a bachelor of arts degree in electrical engineering, a master degree in international business and brings more than 15 years of experience in the telecommunications industry, including developing comprehensive SWOT and competitive analyses; positioning, training and sales support; and, product life cycle management, in accordance with ISO 9001 processes working with cross-functional teams – from engineering to operations. He has direct industry experience working for a number of related companies, including CalAmp Corp., ADC Telecommunications, Digi International and Siemens.

“We are excited to have Matt join the FreeWave product management team,” said Brent McAdams, director, major accounts and product management. “Matt's industry experience in product management, business development and strategic planning combined with his results-focused mentality will provide an integral component to the growth of our Ethernet and Licensed radio product families.”

“I am pleased to join FreeWave and am looking forward to helping make a positive contribution toward its product management efforts,” van Doorn said. “I believe my experience to be an excellent fit for this role, helping FreeWave continue its very successful growth rate going forward.”

About FreeWave Technologies

Founded in 1993, FreeWave Technologies manufactures the most reliable, high performing, lowest power consumption, spread spectrum and licensed radios for mission-critical data transmission. Through engineering excellence and a relentless commitment to best-in-class manufacturing, FreeWave customers enjoy superior radio up-time, range and the lowest cost of ownership available. Based in Boulder, Colorado, FreeWave designs and manufactures radios that are the leading choice for oil and gas, utility, military and numerous other industrial applications. Organizations that count on radio data communications for operational success – where failure and down-time are not an option – trust FreeWave for custom network design, system engineering and customer support that is unparalleled in the market.
